

CCGPS Analytic Geometry  
Right Triangle Trigonometry Practice

1. What is the value of  $x$ ? Round your answer to the nearest tenth.

2. Find the lengths of  $y$  and  $z$  in the diagram below.

3. What is the value of  $y$ ?

4. An isosceles right triangle has one side length of 2 ft. What is the exact length of the hypotenuse?

5. Given the length of the hypotenuse, find the length of the legs of each 45-45-90 triangle.

A. 14

B.  $3\sqrt{14}$

6. Determine if the following are obtuse, acute, or right triangles. Use the Pythagorean Theorem to prove your work.

a.) 7, 12, 9

b.)  $2\sqrt{8}$ , 8, 9

c.) 20, 21, 29

7. Use the Pythagorean Theorem to solve for the missing side lengths. (They are all right triangles)

8. What is the value of  $a$  and  $b$  to the nearest tenth?

9. What is the measure of  $\angle A$  to the nearest degree?

10. Suppose  $\triangle ABC$  is a right triangle with  $\angle B$  the right angle. Explain the relationship between Tangent of angle  $A$  and Tangent of angle  $C$ .

11. Explain the relationships between the sine and cosine of complementary (the 2 acute angles) angles. (Use triangle  $ABC$  above and find  $\sin A$  and  $\cos C$ .)

12. In right  $\triangle ACB$ ,  $AC = 3$ ,  $BC = 4$ , and  $AB = 5$ . Draw a figure.

A. Find the exact value of  $\sin B$ . \_\_\_\_\_

B. Find the exact value of  $\cos A$ . \_\_\_\_\_

C. Find the exact value of  $\tan A$ . \_\_\_\_\_

D. Find measurement of  $\angle A$  (to the nearest degree). \_\_\_\_\_

13. A 24 foot ladder leans against a building and makes an angle of  $68^\circ$  with the ground. To the nearest foot, how far up from the bottom of the building is the top of the ladder?

14. A man that is  $5\frac{1}{2}$  feet tall walks 175 feet from a building and looks at the highest point on the building. The angle formed by the person's line of sight and the horizontal is  $12^\circ$ . To the nearest foot, how tall is the building?

15. You are building a tent. The rope from the top of the tent pole to the ground measures 5 ft long. The angle of elevation is  $68^\circ$ .
- A. Find the height of the pole to the nearest thousandth.
- B. Find the distance from the base of the pole to the stake to the nearest thousandth.
16. If a 200 foot tree casts a 118 foot shadow, what is the angle of elevation of the sun? Sketch a diagram, set up an equation and solve.
17. A plane is flying away from you. Right now, you can see it at an angle of elevation of  $56^\circ$ . Thirteen seconds later, you can see it an angle of  $53^\circ$ . If you know it's at an altitude of 8,000 feet, how far has it traveled in that time? B) How fast is it traveling?
